Hi Katrina,

The CLP lab will attempt to run the Closed System Vials as low level samples even if marked as possible medium level. If concentrations exceed the calibration range, the lab will re-run as medium level.

Subject: Wilcox Oil Company - Lab Request Forms Updated

All, please find attached the Lab Request Forms for Wilcox Oil. As discussed, we will be in the field the weeks of September 12 and September 19. In addition, we have confirmed that additional funding for the project will not be forthcoming in time for us to complete all actions we planned; therefore, the number of samples being requested for soil has been significantly reduced.

Also, you will notice that the plan is to use the pre-weighted vials/stir bar for sampling the VOCs in soil (rather than the core samplers as mention on the conference call). Because of the nature of the sampling, some of them may be medium soil but we are not certain that is the case. Can we indicate on the Chain-of-custody the samples we think will be medium and if the lab finds that the samples may be low, rerun the sample without dilution as a low concentration sample?

Thank you for your time and patience as we worked through these issues. I hope that these forms provide you with a better understanding of what we need for the RI. Please call with any questions.

thanks
